

Cost of PSE's Talbot Hill/Lakeside Transmission Line Project

Abstract

In Columbia Grid's 2011 Transmission Grid Expansion Plan, PSE estimated the cost for Energize Eastside at \$65-\$80 million. When announced to the public in 2014, the project was projected to cost between \$150 and \$300 million. Both of these initial estimates are now woefully out of date. PSE has not provided any cost estimate for the 8.78-mile Talbot Hill/Lakeside Transmission Line Project (THLTL).

The initial estimates did not include the long-term costs of the project when PSE's anticipated 9.8% Return on Equity (ROE) is calculated.

According to CENSE's consultant's calculations, using PSE's original projections, the total cost of the project over time ranges from \$579 million to \$2.4 billion, depending on actual initial cost and project lifespan.

Recent information from PSE shows that \$69.5 million has already been spent on the transmission project. That enormous expenditure at this pre-permit stage of the project indicates that the total costs for the project before ROI will very likely be at or beyond the high end of either PSE's or CENSE's consultant's estimates.

PSE's ratepayers will pay for the project, despite misleading statements to the contrary in some of PSE's promotional materials. PSE's analysis of alternative solutions concluded that all of the alternatives were more costly than transmission lines. CENSE has continued to examine the various alternatives to 18 miles, or even just 7-8 miles of towers and transmission lines and finds that costs for alternatives have fallen dramatically since PSE's initial assessment, and all indications are that costs will continue to fall rapidly.

PSE promised to provide updated project costs following the selection of a preferred route. It has not done so.

Given the scale of the long-term financial obligation for its citizens, Renton cannot approve a project without accurate, up-to-date cost data.

4. Conclusion

1. Cost of Project

Original estimates – Columbia Grid

Columbia Grid is the non-profit corporation whose mission is to improve reliability and efficient use of the transmission grid, perform transmission planning and facilitate the development of solutions related to the operation, use and expansion of the interconnected Northwest transmission system. It lists the project publicly known as Energize Eastside in each of its currently available *Biennial Transmission Grid Expansion Plan* documents: 2009, 2011, 2013, 2015, 2017; and in the three mid-biennium updates: 2010, 2012 and 2016.

The biennial plans indicate some project evolution, and one notable constant. Figures 1A and 1B summarize the data from these reports. Of note, although changes were made in each biennial plan or mid-biennium update, once project cost was estimated at \$65 – 80 million in 2009, it was not updated until 2018, and then only to \$110 million, in spite of the fact that from the first public discussions in 2014, PSE told the public that project cost would be \$150 – 300 million, substantially more than PSE indicates in even the most recent Columbia Grid estimate.

A notable absence from the Columbia Grid planning process is any mention of the newly-truncated 8.78 mile south-end only Talbot Hill/Lakeside Transmission Line (THLTL) Project.

Current estimates

Although PSE still estimates to Columbia Grid that Energize Eastside will cost \$65 – 80 million, on the PSE website the cost estimate has been increased to \$150 – 300 million¹. This figure is repeated in multiple locations². This figure has not changed since 2014, although PSE said, “Once we determine the final design and alignment, we will have a better idea of the total cost.”³ No PSE updates to total cost are available on the Energize Eastside website.

Estimate needed for shorter project: Talbot Hill/Lakeside Transmission Line

Although PSE’s website continues to state that the Energize Eastside project “will build a new substation and upgrade approximately 16 miles of existing transmission lines from Redmond to Renton,”⁴ PSE has stated that they do not know when permit applications will be filed for the northern 7.4 miles⁵, and in fact the project north of the Lakeside Transmission Substation will be for “redundancy only” and that the THLTL can “function independently.”⁶

PSE has not provided any cost estimates for the shorter, 8.78 mile, Talbot Hill/Lakeside Transmission Line project.

Expenditures to date

The Energize Eastside Project has been in the public eye since it was announced in December 2013. Starting in 2014, the public process began to select a final route, develop draft and final Environmental Impact Statement and move towards permitting. As of the end of 2018, PSE reported that they spent \$69,530,354⁷ on the Eastside Transmission Project, also known as Energize Eastside. This is the expenditure as reported to the Federal Energy Regulatory Commission (FERC), the agency within the U.S. Department of Energy that, among other responsibilities, administers accounting and financial reporting rules of its jurisdictional companies.

From City of Bellevue Resolution 9297, stating, “Authorizing execution of an amendment to the Professional Services Contract with Environmental Science Associates (ESA) by \$688,595 for a total amount not to exceed \$3,170,335, plus all applicable taxes, to prepare a Final Environmental Impact

Statement (EIS) for PSE's proposed Energize Eastside Project."⁸ We can see the cost for the EIS, which may, or may not, have been included in the \$54,634,345.00 spent by PSE by end of 2017.

It is clear that having spent over \$69.5 million before permits are issued or any work has commenced, the Energize Eastside cost estimates PSE has provided to Columbia Grid (\$65 – 80 million or \$110 million) are not realistic. This level of expenditure at this stage of the project also raises serious questions about PSE's public cost projections of \$100 - \$300 million. The fact that the project may now be only 54% of its original length, (8.78 miles, not 16 miles) makes the \$69.5 million pre-permit expenditure even more questionable. And none of these estimates consider the overall cost of the project over time, calculating the 9.8% standard allowable profit (Return on Investment-ROI) discussed in Section 5, and likely to be approved by the Washington Utilities and Transportation Commission (WUTC) once Energize Eastside is built.

2. Cost of Project Over Time – Lifetime Cost Analysis

Puget Sound Energy's website <https://energizeeastside.com/faqs> says the following about the total cost of the project:

“Who will pay for the project and how much will it cost?”

“Regular upgrades or additions to the electric infrastructure are shared by all of PSE’s 1.1 million customers and paid for over time. We don’t yet know the total cost of the project but estimates range from \$150 million to \$300 million”.⁹

CENSE engaged Jeffrey King, a utility financing expert who worked as a Senior Resource Analyst for the Northwest Power Planning Council for nearly 30 years, to analyze the lifetime cost of the project. At the time of his analysis, the above estimates were not available. Mr. King used a placeholder of \$100 million to conduct the MicroFin Levelized Project Revenue Requirements model calculations. Details of this calculation are available in the report “Estimation of the fixed charge rate and revenue requirements for the proposed Energize Eastside transmission project”, February 10, 2016¹⁰.

Mr. King stated that \$100 million “is substantially greater than typical cost for a 230kV project of this size, however the congested nature and environment of the proposed corridor will likely increase construction cost well above typical costs.”¹¹ Mr. King goes on to say, “Once construction cost estimates are available, revenue requirements can be calculated by taking ratios of \$100 million”¹².

Another variable is the length of useful life. PSE estimates that the service life of transmission facilities will range from 45 to 65 years.

Therefore, the total cost of the project to local ratepayers over time ranges from \$579 million to more than \$2.4 billion, depending on the initial total cost and useful life. See Table 1.

250 MM overnight cost; 65-year useful life	\$31,262,500.00	\$2,032,062,500.00
300 MM overnight cost; 45-year useful life	\$38,607,000.00	\$1,737,315,000.00
300 MM overnight cost; 55-year useful life	\$37,866,000.00	\$2,082,630,000.00
300 MM overnight cost; 65-year useful life	\$37,515,000.00	\$2,438,475,000.00

**Revenues based on initial cost of investment.*

If Energize Eastside is built, PSE is virtually assured of receiving WUTC approval for the 9.8% annual return. In public testimony before the Bellevue City Council, Mr. Mark Vasconi, WUTC Director of Regulatory Services, stated that he was unaware of any situation in which the WUTC had questioned a utilities' request for reimbursement of investment¹³.

¹³ City of Bellevue, City Council, Summary Minutes of Study Session, July 7, 2014, p.5.

3. Cost of Alternatives

PSE original estimates

In 2015 PSE contracted for a report entitled, “Eastside System Energy Storage Alternatives Screening Study”, written by Strategen Consulting, LLC. The report concluded, not surprisingly, that based on PSE’s inflated needs-paradigm, all of the studied alternatives either cost far more than PSE’s preferred pole and wire configuration or were limited in scope to eliminating only emergency overload situations, and thus didn’t meet the pre-set requirements. PSE’s low-ball estimates, given the \$54 Million spent to date, exaggerate the cost differences.

Table 2 Energy Storage Configuration Summary¹⁴

Configuration	Power (MWp)	Energy (MWh)	Duration (hours)	Est. Cost (\$MM)	Includes Non-Wires Alternatives ¹¹	Technically Feasible	Meets Requirements
<u>Baseline</u> Normal Overload Reduction	328	2,338	7.1	\$1,030	✓	✗	✓
<u>Alternate #1</u> Emergency Overload Elimination*	121	226	1.9	\$184	✓	✓	✗
<u>Alternate #2</u> Normal Overload Elimination	545	5,771	10.6	\$2,367	✓	✗	✓

In 2018, Strategen produced the “Eastside System Energy Storage Alternatives Assessment Report Update – September 2018,” likely to counter mainstream and industry media reports of battery storage costs falling rapidly in recent years. The technical details of the various scenarios will be discussed in the Section 6 of this document. Strategen’s updated cost estimates for battery storage ranged from a low of \$824 Million to a high of \$1.455 Billion intending to make the Energize Eastside look like a good deal at an estimated cost of \$150 – \$300 Million.

As PSE has now substantially changed the scope of the project to the 8.78 miles between Talbot Hill and Lakeside Substations any cost estimates previously made for alternatives are meaningless. A new analysis and cost estimate are necessary to make an informed decision.

CENSE estimates: alternatives costs decreasing

The technical possibilities for alternative solutions are presented in CENSE consultant EQL's report in Section 6 of this document. We do know that costs for alternatives such as battery storage, demand response and smart grid solutions are decreasing.¹⁵ There are many additional sources in the Appendices to document this trend. In fact, a major planned transmission line between NW Oregon and SW Washington was canceled in 2017, in favor of "non-wire alternatives, grid management, and energy storage"¹⁶, to quote BPA Administrator and CEO Elliot Mainzer, "embracing a more flexible, scalable, and economically and operationally efficient approach."¹⁷

Comparing the cost for alternatives is now impossible, because PSE has moved the goalposts in anticipating a much smaller project, the 8.78-mile Talbot Hill/Lakeside Transmission Line. Not only do we not have a cost estimate for the shorter project, we have no analysis of or cost estimates for any possible alternatives.

4. Who Pays for Energize Eastside?

The simple answer is: The costs will be "shared" by all of PSE's 1.1 million customers¹⁸, and paid for over time, as we have seen in Jeffrey King's analysis above.

PSE's shifting explanations are documented by Russell Borgmann in his paper, "Who Pays for Energize Eastside?"¹⁹:

1. "<From PSE's website from 2014 until August 2016> *"Who will pay for Energize Eastside and how much will it cost? Upgrades or additions to the electric infrastructure are shared by all of PSE's 1.1 million customers and paid for over time. We don't yet know the total cost of the project, but estimates range from \$150 million to \$300 million. **We expect approximately \$1 to \$2 of the average monthly bill for residential customers will go towards paying for Energize Eastside.***
2. <From PSE's website from 2014 until August 2016> *"Once we determine the final design and alignment, we will have a better idea of the total cost."*
3. <From PSE's website, changed in August 2016> *"Who will pay for Energize Eastside and how much will it cost? Regular upgrades or additions to the electric infrastructure are shared by all of*

¹⁹ Borgmann, Russell, "Who Pays for Energize Eastside?" March, 2018

PSE's 1.1 million customers and paid for over time. We don't yet know the total cost of the project, but estimates range from \$150 million to \$300 million. Once we determine the final design and alignment, we will have a better idea of the total cost. **We don't expect customers will see any changes in their monthly bill to pay for this project.**"

<https://energizeeastside.com/faqs> (screenshots exist of PSE's older website pages)

4. <From PSE's recent Energize Eastside flyer received in the mail, 8/11/2017> "How will Energize Eastside affect rates? **Customers will not see an increase in their monthly bill as a direct result of Energize Eastside.** That's because PSE's annual capital budget, which funds infrastructure upgrades is **already included in customer rates.**"
5. <From PSE's Docket Nos. ER12-778-000 and EL12-46-000, dated February 14, 2013> "3. Cost of Capital/Return on Equity: The Settlement describes the Parties' agreement that PSE shall be entitled to earn a return on equity ("ROE") of 9.8% on its transmission rate base, **except that with respect to those transmission facilities identified in the Memorandum of Agreement between BPA, PSE, and Seattle City Light** (BPA Contract No. 11TX-15450) dated January 31, 2012 ("PSANI Facilities"), **PSE shall be entitled to an ROE of 10.3%.** The ROE provisions of the Settlement **reflect a downward negotiation from the 10.6% ROE originally requested by PSE in its January 6 Filing.** The higher equity return for the PSANI Facilities is reflected in Attachment 7 of the Formula Rate Template attached to the Settlement as Exhibit A. The Settlement also provides that the equity component of PSE's capital structure will be capped at 50%."
http://www.oatioasis.com/PSE/PSE/docs/Formula_Rate_Settlement_Package.pdf
6. <From communications with the WA Assistant Attorney General, Public Counsel Unit Chief, dated September 20, 2017> "...The Utilities and Transportation commission does not pre-approve utility projects – in other words, **ratepayers do not pre-pay for projects.** Utilities must first make the investment, seek rate recovery, prove prudence, then ratepayers pay for the project. It is my understanding that Energize Eastside is still in the planning phase and has not yet been built....If the transmission project is built and determined prudent, the amount invested will be included in rates and all customers will pay for it in rates....In many respects **we are a reactionary party** – we react to proposals brought before the Commission by the utilities."²⁰

Mr. Borgmann further explains there are many unanswered questions about by whom, how and when Energize Eastside will be paid for:

7. <From the August 2017 mailing from PSE> PSE is leading customers to believe that their rates will not increase. In fact, their statements lead ratepayers to believe they are already paying for Energize Eastside. (see #3: "...already included in customer rates...")

²⁰ Ibid.

Statement #4 sounds like PSE may have already pre-negotiated a ROE on Energize Eastside of 10.3% as far back as 2013. The Memorandum of Agreement (MOA) between BPA, PSE, and Seattle City Light discusses Energize Eastside (nee: Sammamish to Lakeside to Talbot Rebuild Project and Lakeside 230 kV Transformer Addition Project).

http://www.energizeeastsideeis.org/uploads/4/7/3/1/47314045/2015-06-01_moa_with_bpa-seattlecitylight-pse.pdf

Are ratepayers already paying for Energize Eastside when the final EIS was just issued in March 2018? Are ratepayers already paying for Energize Eastside when the City of Bellevue (lead SEPA agency) has not yet issued permits? Are ratepayers already paying for Energize Eastside when PSE has not yet applied for permits on the Northern Segment (Lakeside substation north to Redmond)? Are customers paying for a project that has not yet gone through a prudency review by the WUTC?²¹

And the biggest question of all: Why does PSE find it necessary to offer many different and misleading answers to a very simple question: Who will pay for Energize Eastside?

Again, the answer is simple. PSE's 1.1 million ratepayers will pay. The cost will be hidden away, it may not be noticed, but it will be paid.

5. Conclusion

The estimated costs of Energize Eastside as presented to Columbia Grid even as recently as 2018 are outdated, vastly understated and do not match what PSE is telling the public and the city councils being asked to approve this project. As of December, 2018, PSE has spent over \$69.5 million on Energize Eastside. The total cost of Energize Eastside may well exceed PSE's high-end estimate of \$300 million, made over 4 years ago. A promised update on costs has not been forthcoming. PSE has, over time, given different and misleading answers about who will pay for the project. Now, on the eve of permitting, PSE is anticipating a much smaller project. PSE should be required to provide updated information on both expenditures to date and a cost estimate for the shorter, 8.78-mile Talbot Hill/Lakeside Transmission line project, including the proposed Richards Road Substation. A permit should not be granted and citizens should not be obligated to pay for a project for which no one knows the price tag.

²¹ Ibid.
